PROUD TO SERVE YOU

Dear customers,

New means of communication make paper-catalogues less useful but this short-form catalogue is an eagerly anticipated product selection guide.

Our strategy has always been to focus on research and innovation whilst remaining flexible enough to adapt products to our customers' applications and requirements. As a result we can offer products engineered to the highest quality for competitive prices. These core values have inspired us to develop several new products which can be found in this selection guide.

This selection guide catalogue is available in 6 languages, Chinese included. This demonstrates our worldwide presence and export dynamism: celduc® relais exports more than 60% of its production across the the main industrial countries, under our brand or through OEM contracts.
celduc® relais is a leader in its three strategic business units which are Solid State Relays (S), Magnetic proximity sensors (P) and reed relays & switches (R).

  Our products also meet the major European directive regarding the CE marking.
- *Some of our products fulfil the requirements according to DIN EN60601-1 (VDE 0750) for medical applications and also the requirements for explosive atmospheres ATEX "EX".*
- *All of our relays okpac® SO (as well as SC relays), celpac® 2G SU/SA including the current sense module ESUC but also the 2-phase SOB and 3-phase SGT comply with the European standard EN61373 for railways : Shocks and vibration tests on relays. Regarding the standards about Fire behaviour and fumes : French standard NF F16-102 calling for the EN60 695-2-10/11/12 (Glow Wire tests), blue covers of SO relays and SU/SA relays are classified I2 or I3 for fire behaviour and F2 for fumes (toxicity and opacity). Encapsulating resin and black housings are being completed.*
- *The process of manufacturing of our relays complies with the ISO9001 requirements version 2008. We incorporate highly reliable components with a very high electromagnetic interference level.*

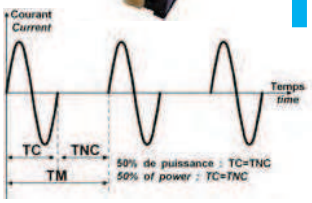
PHASE ANGLE CONTROLLERS

NEW

SO3 range Burst control mode (µP based unit)



This control mode is particularly suitable for resistive loads having a low thermal inertia like short wave Infra Red sources (IR lamps). It allows a very fine control of power according to the analogue input signal while reducing noise emission level (EMC conducted emissions).
This control mode consists in switching streams of full sine waves equally distributed along a fixed modulation period (TM) function of the analogue input signal. The µP constantly computes the number of full sine waves to be switched along the TM period.

Magnetic Proximity Sensors

MAGNETIC PROXIMITY SENSORS

We are the experts ! !!!

If you are looking for position, presence, level or speed detection, then we will be able to offer a solution from our range of magnetic sensors.

We can even design a specific product for your applications !

At celduc® relais, we are eager to offer the best products for your application, thanks to our 30-year experience in the key technologies that we use in our products :

- Reed switch, a dry contact in a sealed glass bulb providing insulation at the same time : a simple, reliable and low cost solution.
- Electronic cell, based on either magneto-resistance or Hall effect, necessary for higher performance, particularly in high frequency operation.

Contents

REMINDER : Reed switches and magnetic sensors using reed switches can switch AC or DC current. In our technical data-sheets the values given for current and voltage are the maximum values. It means that in DC applications it corresponds to the max. switching current and voltage. In AC applications these values are the peak values, to obtain the nominal value you should divide by 1,414.

REED MAGNETIC SENSORS

Working principle

A float fitted with one or more magnets moves with the liquid and actuates, due to its magnetic field, a hermetically sealed reed contact located in the body of the float.

Advantages

-One moving part
-The Reed contact is actuated by a magnetic field only : no contact so no wear
-The Reed contact is completely isolated from the liquid so perfectly waterproof
The above advantages allow a safety use, repetitiveness, precision and minimum maintenance.

SENSORS FOR SPECIFIC APPLICATIONS

Sensors for lifts

(and other industrial applications)

Sensors for : - Detection of the lift position
- Doors opening control

celduc® relais offers a wide range of magnetic sensors for elevators with reed switches or “Electronic” magnetic sensors using an Hall effect cell or magneto resistance.

The magnetic field created by the permanent magnet, activates the sensitive part (the reed switch or the Hall effect cell or the magneto resistance). It is important to combine the magnet and sensor with consideration to the correct operating conditions (switching distance, presence of ferro-magnetic parts or non ferro-magnetic parts...).

celduc® relais is at your disposal to help you define the right products.

Advantages : - insensitive to the ambient working conditions (heat or cold air, humidity, dust…)
- high reliability
- large detection distance
- good reliability to shocks and vibrations
- IP67
